

Drug Status Report

Drug: 14-Acetyloxycodone

Drug Name Status: 14-Acetyloxycodone is the common name.

Chemical Name: 4,5-Epoxy-14-hydroxy-3-methoxy-17-methylmorphinan-6-one acetate

Chemical Structure:

Molecular Formula: $C_{20}H_{23}NO_5$

Pharmacological class / Application: opiate

International status:

US: 14-acetyloxycodone is not listed specifically in the Schedules to the CSA but would be considered a controlled substance according to the definition of an opiate in the CSA.

United Nations: The substance is not listed on the Yellow List - List of Narcotic Drugs under International Control. However, as an ester or oxycodone, it would likely be included in Schedule I of the 1961 Convention.

Canadian Status: 14-acetyloxycodone is a derivative of oxycodone, which is listed under item 1 (sub-item 28) of Schedule I to the CDSA under the heading "Opium Poppy (*Papaver soniferum*), its preparations, derivatives, alkaloids and salts, including:" Therefore, 14-acetyloxycodone is included under item 1(28) of Schedule I to the CDSA as a derivative of oxycodone.

Recommendation: 14-acetyloxycodone is included under item 1(28) of Schedule I to the CDSA and is considered a controlled substance.
