

Drug Status Report

Drug: Ergoloid Mesylates

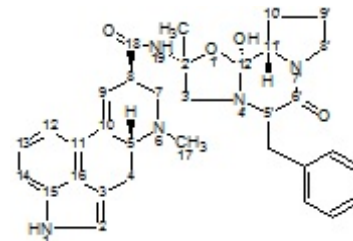

Drug Name Status: Ergoloid mesylates is the proper (USAN) name

Chemical Name: Ergoloid mesylates is mixture of mesylate salts of ergotamans.

Chemical structure:

Ergoloid Mesylates

Ergotamine

where for:	R=
dihydroergocoine	
dihydroergocritine	
dihydro- α -ergocryptine	
dihydro- β -ergocryptine	

Pharmacological class / Application: Nootropic agent; adrenergic alpha-antagonist

International status:

US: The substance is not listed specifically on the schedules to the CSA. It is also not mentioned on the DEA website.

United Nations: The substance is not listed on the Yellow List - List of Narcotic Drugs under International Control. The drug is not listed on the Green List - List of Psychotropic Substances under International Control.

Canadian Status: Item 6 of Part I of Schedule VI to the CDSA is, "Ergotamine and its salts," The structure of ergotamine is shown above. The components of Ergoloid mesylates are not salts of ergotamine.

Recommendation: Ergoloid mesylates is not included in the schedules to the CDSA and is not a controlled substance nor a precursor.
