

STATUS DECISION OF CONTROLLED AND NON-CONTROLLED SUBSTANCE(S)

Substance: Estriol

Based on the current information available to the Office of Controlled Substances, it appears that the above substance is:

Controlled []
Not Controlled [X]

under the schedules of the Controlled Drugs and Substances Act (CDSA) for the following reason(s):

- Being female hormones they do not exhibit Anabolic characteristics
While references to these compounds being metabolic derivatives of controlled anabolic steroids exist, by virtue of the fact that they are produced via a metabolic pathway and not a "chemical" derivitization this leads to the conclusion that they are not "true" derivatives.
Therefore given that these female hormones, and are not anabolic in nature they should therefore not controlled under the CDSA.
