STATUS DECISION OF CONTROLLED
AND NON-CONTROLLED SUBSTANCE(S)

Substance: 6-(2-aminopropyl)benzofuran

Based on the current information available to the Office of Controlled Substances, it appears that the above substance is:

- Controlled
- Not Controlled

under the schedules of the Controlled Drugs and Substances Act (CDSA) for the following reason(s):

- The substance is considered to be an analogue of MDA and is included under item 1(5) of Schedule III to th CDSA.

DIRECTOR, OFFICE OF CONTROLLED SUBSTANCES

This status was requested by:“third party information removed as per agreement with applicant”
Drug Status Report

**Drug:** 6-(2-aminopropyl)benzofuran

**Drug Name Status:** 6-(2-aminopropyl)benzofuran is the common name.

**Chemical Name:** 6-(2-aminopropyl)benzofuran

**Other Names:** 1-(1-benzofuran-6-yl)propan-2-amine; 6-APB

**Chemical structure:**

![Chemical structure](image)

**Molecular Formula:** $C_{11}H_{13}NO$

**Pharmacological class / Application:** Amphetamine analogue

**CAS-RN:** 286834-85-3

**International status:**

**US:** The substance is not listed specifically in the CSA and is not mentioned anywhere on the DEA website. However, the substance may be considered controlled under the analogue provision of the CSA.

**United Nations:** The substances are not listed on the Yellow List - List of Narcotic Drugs under International Control nor the Green List - List of Psychotropic Substances under International Control.

**Canadian Status:** 6-(2-aminopropyl)benzofuran is not currently listed in the CDSA. However, the substance is considered to be an analogue of 3,4-methylenedioxyamphetamine (MDA) and was initially synthesized to examine its role as a serotonin (5-HT$_{2C}$) receptor agonist$^1$. MDA is listed as sub-item 5 under item 1 of Schedule III to the CDSA, under the heading “Amphetamines, their salts, derivatives, isomers and analogues and salts of derivatives, isomers and analogues including”. Given that 6-(2-aminopropyl)benzofuran is

substantially similar in structure to MDA, the substance is considered to be an analogue of MDA and is included under item 1(5) of Schedule III to the CDSA. Recently, the status of 6-(2-aminopropyl)-2,3-dihydrobenzofuran was reviewed and was also determined to be controlled on the basis that it is an analogue of MDA. A copy of the status report 6-(2-aminopropyl)-2,3-dihydrobenzofuran is appended.

**Recommendation:** 6-(2-aminopropyl)benzofuran is included under item 1(5) of Schedule III to the CDSA and is a controlled substance.

**Date:** 1 September 2010
Drug Status Report

Drug: 6-(2-aminopropyl)-2,3-dihydrobenzofuran

Drug Name Status: 6-(2-aminopropyl)-2,3-dihydrobenzofuran is the common name.

Chemical Name: 6-(2-aminopropyl)-2,3-dihydrobenzofuran

Other Names: 6-Nprop-dbf; 6-APDB

Chemical structure:

\[
\text{MDA}
\]

Molecular Formula: \( \text{C}_{11}\text{H}_{15}\text{NO} \)

CAS-RN: 152623-93-3

Pharmacological class / Application: Amphetamine analogue

International status:

US: The substance is not currently listed on the schedules to the US Controlled Substances Act and is not mentioned on the DEA website. However, 6-(2-aminopropyl)-2,3-dihydrobenzofuran is likely to be considered controlled in the US due to the analogue provisions in the CSA.

United Nations: The substance is not listed on the Yellow List - List of Narcotic Drugs under International Control nor the Green List - List of Psychotropic Substances under International Control.

Canadian Status: 6-(2-aminopropyl)-2,3-dihydrobenzofuran is an analogue of 3,4-methylenedioxyamphetamine (MDA) and was initially synthesized to examine the role of the dioxole oxygen atoms of MDA in its interaction with serotonin and catecholamine uptake carriers\(^2\). MDA is listed as sub-item 5 under item 1 of Schedule III to the CDSA, under the

\(^2\)Monte, AP. et al. (1993) Synthesis and pharmacological examination of benzofuran, indan, and tetralin analogues of 3,4-(methylenedioxy)amphetamine, J. Med. Chem. 36: 3700-
heading “Amphetamines, their salts, derivatives, isomers and analogues and salts of derivatives, isomers and analogues including”. Given that 6-(2-aminopropyl)-2,3-dihydrobenzofuran is an analogue of MDA, the substance must be included under item 1(5) of Schedule III to the CDSA.

Recommendation: 6-(2-aminopropyl)-2,3-dihydrobenzofuran is included under item 1(5) of Schedule III to the CDSA and is a controlled substance.

July 9th, 2010.
