International status:

US: 2,4-Dimethoxy-5-ethoxyamphetamine and 2,5-Dimethoxy-4-propoxyamphetamine are not listed specifically in the Schedules to the US *Controlled Substances Act*. However, they may be considered controlled under the analogue provision of the CSA.

United Nations: The substances are not listed on the Yellow List - List of Narcotic Drugs under International Control, the Green List - List of Psychotropic Substances under International Control, nor the Red List - List of Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances Under International Control.

Canadian Status: 2,4-Dimethoxy-5-ethoxyamphetamine and 2,5-dimethoxy-4-propoxyamphetamine are part of a series of designer amphetamines synthesized by Shulgin and
tested for their potential stimulant/hallucinogenic potential and are not listed specifically in the CDSA. “Amphetamines, their salts, derivatives, isomers, analogues and salts of derivatives, isomers and analogues” are currently listed as item 1 of Schedule III to the CDSA and as amphetamines, these substances are by virtue considered captured under the item heading. It is noteworthy that 2,4-dimethoxy-5-ethoxyamphetamine may also be considered substantially similar in structure to 2,4-dimethoxyamphetamine, while 2,5-dimethoxy-4-propoxyamphetamine may be considered a structural analogue of 4-ethyl-2,5-dimethoxyamphetamine which is currently listed as sub-item 1(14) in Schedule III to the CDSA.

**Recommendation:** 2,4-Dimethoxy-5-ethoxyamphetamine and 2,5-dimethoxy-4-propoxyamphetamine are included under item 1 of Schedule III to the CDSA and are controlled substances.
