STATUS DECISION OF CONTROLLED AND NON-CONTROLLED SUBSTANCE(S)

Substance: Estriol

Based on the current information available to the Office of Controlled Substances, it appears that the above substance is:

- Controlled □
- Not Controlled X

under the schedules of the *Controlled Drugs and Substances Act* (CDSA) for the following reason(s):

- Being female hormones they do not exhibit Anabolic characteristics
- While references to these compounds being metabolic derivatives of controlled anabolic steroids exist, by virtue of the fact that they are produced via a metabolic pathway and not a "chemical" derivitization this leads to the conclusion that they are not "true" derivatives.
- Therefore given that these female hormones, and are not anabolic in nature they should therefore not controlled under the CDSA.
