Pharmacological/chemical class / Application: Drug related substances
**International status:**

US: These substances are not listed on the schedules to US Controlled Substances Act and are not mentioned on the DEA website.

United Nations: The substances are not listed on the Yellow List - List of Narcotic Drugs under International Control nor the Green List - List of Psychotropic Substances under International Control.

Canadian Status: These substances appear to be a list of related substances to be found in a raw material. Pfizer provides a similar listing for its Progesterone USP ([http://www.pfizercentresource.com/sites/centresource/products/Pages/progesterone_USP.pdf](http://www.pfizercentresource.com/sites/centresource/products/Pages/progesterone_USP.pdf)). Some of the substances are EP impurities. For example, substances XII-XV are EP Impurities A, E, F, and G. Others, such as I\(^1\), II\(^2\) and III\(^3\) are recognized metabolites of progesterone. Substance IV\(^4\) is a starting material for the synthesis of many steroids. The remaining substances have structures consistent with their being progesterone related substances.

None of the substances are structurally similar to the anabolic steroids listed in item 23 of Schedule IV to the CDSA. There are no reports that the substances have anabolic activity.

Recommendation: Substances I to XV are not included in the schedules to the CDSA and are not controlled substances.
