**International status:**

US: Estrone-3-glucuronide and estrone-3-beta-D-glucuronide, sodium salt are not listed specifically in the Schedules to the US *Controlled Substances Act* and are not mentioned anywhere on the DEA website.

United Nations: The substances are not listed on the Yellow List - List of Narcotic Drugs under International Control, the Green List - List of Psychotropic Substances under International Control, nor the Red List - List of Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances Under International Control.

Canadian Status: Estrone-3-glucuronide and its sodium salt are not currently listed in the CDSA. Estrone-3-glucuronide is a metabolite of estrogen and is used for predicting the start of a potentially fertile period of women. Estrone-3-glucuronide is considered to be the most important urinary parameter for this prediction. There are no reports in the scientific literature that estrone-3-glucuronide and its sodium salt display any anabolic activity. They are not derivatives of an anabolic steroid. Therefore, estrone-3-glucuronide and estrone-3-beta-D-glucuronide, sodium salt cannot be included under the heading “Anabolic steroids and their derivatives:” of item 23 of Schedule IV to the CDSA.

**Recommendation:** Estrone-3-glucuronide and estrone-3-beta-D-glucuronide, sodium salt are not included under the Schedules to the CDSA and are not controlled substances.
