Substance: Methyl acrylate

Based on the current information available to the Office of Controlled Substances, it appears that the above substance is:

Controlled  ☐
Not Controlled  ✔

under the schedules of the *Controlled Drugs and Substances Act* (CDSA) for the following reason(s):

• The substance is a starting material in the synthesis of ohmefentanyl and is not structurally similar to any of the substances listed in the CDSA.

Drug Status Report

Drug: Methyl Acrylate

Drug Name Status: Methyl Acrylate is the common name.

Chemical Name: 2-Propenoic acid, methyl ester

Other Names: Acrylic acid methyl ester; methoxycarbonylethylene; methyl 2-propenoate

Chemical Structure: 

\[
\begin{array}{c}
\text{O} \\
\text{C} \\
\text{O} \ 	ext{C} \\
\end{array}
\]

Molecular Formula: C₄H₆O₂

CAS-RN: 96-33-3

Pharmacological class / Application: Fine chemical

International status:

US: The substance is not listed specifically in the CSA and is not mentioned anywhere on the DEA website.

United Nations: The substance is not listed on the Yellow List - List of Narcotic Drugs under International Control, the Green List - List of Psychotropic Substances under International Control, nor the Red List - List of Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances under International Control.

Canadian Status: Methyl acrylate is reported to be one of the starting material in the synthesis of ohmefentanyl and is not currently listed in the CDSA. The substance is not structurally similar to any of those included in the schedules to the CDSA.

Recommendation: Methyl acrylate is not included in the schedules to the CDSA and is not a controlled substance.
