Drug Status Report

Drug: rac Norphenylephrine hydrochloride

Drug Name Status: rac Norphenylephrine hydrochloride is the common name.

Chemical Name: Benzenemethanol, alpha-(aminomethyl)-3-hydroxy-, hydrochloride (9CI)

Other Names: Benzyl alcohol, alpha-aminomethyl-3-hydroxy-, hydrochloride; Norfenefrine HCl; Norphenephrine hydrochloride; Norphenylephrine hydrochloride; WIN 5501; Norfenefrine hydrochloride.

Chemical structure:

Molecular Formula: C₈H₁₁NO₂. HCl

Pharmacological class / Application: Fine Chemicals

CAS-RN: 4779-94-6

International status:

US: rac Norphenylephrine hydrochloride is not listed in the US Controlled Substances Act and is not mentioned anywhere on the DEA website.

United Nations: The substance is not listed on the Yellow List - List of Narcotic Drugs under International Control, the Green List - List of Psychotropic Substances under International Control, nor the Red List - List of Precursors and Chemicals Frequently Used in the Illicit Manufacture of Narcotic Drugs and Psychotropic Substances Under International Control.

Canadian Status: rac Norphenylephrine hydrochloride is not specifically listed in the schedules to the CDSA. It is the desmethylated form of phenylephrine, which is listed as a Schedule F substance under the Food and Drugs Regulation under the heading “Phenylephrine and its salts in preparations for ophtalmic or parenteral use in concentrations greater than 2.5%”. Since the substance does not display any similarity to those listed in the CDSA, it is not considered a controlled substance.

Recommendation: rac Norphenylephrine hydrochloride is not included in any of the Schedules to the CDSA and is not considered a controlled substance.

Date: February 2nd, 2012.
