

MEM p 78. TMA-2 -

11.0 mg - day of lunch faces, fun, nausea of ice-cream cone.

MEM (11.0 mg)

10:20AM 11.0 mg.  
 12:00 lunch - long - many faces - down to Peppers - ice cream. - to Robert's lab.  
 1:20 - telephone - each side descending. concentrate on both -> rotation. books to office (1:30) & comments.  
 1:20 -> 1:30 slow - am sure no H<sub>2</sub>O next day.

2:00 coming out - hazy - never in control.

TMA2 (11.0mg)

10:00AM 11.0 mg 9/26/67  
 12-1 lunch more faces, more need of language control then MEM - afternoon into 2 or so before the intensified black & white sparkle was certain to be dying out.

At no point was this more than very rich threshold - but it was there and a real unworld.

As a unworld agent - this is the more potent - but for giggle & fun - MEM is probably more effective.

at first approx —> A = B <—  
 must try both at maybe 15 mg. Maybe try will.

[+] 1:00PM

6/23/76 [12 mg] ATS threshold - [1:30] (2:30) real - some temple pressure & light-headed - at AM [3:00] [4:00] still real - out [5:00] complete control.

11/20/76 [16 mg] ATS 1:30 pm afternoon of Pacific Overtures - possible marginal effect - the ???? was itself bizarre - no evening problems. Not a good expt.
