± 0.7mg } from page 95 - other subjects 0.9-2.0 & I.V.
+ 1.0mg }
++ 1.5mg }
- + 2.5mg 1/15/77 10:30AM ATS =[0:00]. At [1:15] first paraesthetic twinges. [2:00] very light intoxication. less than DOM. [3:00] I can enjoy it or ignore it - this might normally be missed - but there are signs of "unmasking" but no window. [4:30] still light effect - this has all been very little more than threshold. [9:30] still residual awareness [13:00] probably clear of symptoms.
- ±(++) 4.0mg 2/4/77 10:30AM ATS =[0:00] at [1:15] effects noted - and I was surprised as I had forgotten expt. [1:50] slight but real [2:15] subtle - can be ignored. As window or as STP-psychotomimetic - only ± - But-as mood, energizer - there was surely a ++ or better effect. Hewitt is right! None of the psychotomimetic effects - but one brings into function whatever one wants. Worked cleaning lab to 11pm - slept very well - a good, going effect - but not by any means any LSD or STP seriousness.
- +++ ! 6.0mg 10/9/77 12:15PM ATS =[0:00] effects at [1:15] - emotional interaction [with] Ted - unfair - alone at [2:15] intensely stoned [2:30] to +++ the psychosis of the 2-carbon - completely - except that there is much sensory distortion. [3:30] onto bed [with] radio - mental construction [with] eyes closed - open, walls fall in [5:15] to hill top - sensory interpretation is wild - but controllable. [5:45] eat [with] some success - mental is straightening up, but sensory is still wild. Hewitt is wrong - this is an LSD like psychotomimetic, + psychosis aspects. [8:15] sanity OK - sensory still wild. Rotate K.R. flask without touching it. Hose on patio can be twitched at will, mentally. [12:00] try bed - no sleep. next AM - strange - but perhaps due to no sleep. Next afternoon - pretty much OK. A wild and not too unpleasant +++ - at least the sensory provides same reward for the psychosis.
- +++ 6.0mg 12/17/78 (AG 6.0, TG 6.0) 10:50 =[0:00] - [1:00] subtle onset [2:00] very quietly into ++ AG a little less, TG a little more [2:30-5:00] TG up to state of physical distress - flaccid muscles - extreme tremor. Biding time of recovery. AG drops back to comfort and assist - I go back and forth - concerned but not worried. Dogless dog-walk around many blocks. [8:00] generalized review - TG only occasionally back into body still ++ or +++ [12:00] comfortable part - psychedelic reverie. TG stable AG completely re enters the ++ that had denied himself. [14:00] try bed - [14-18:00] perhaps sleep, perhaps not, but vivid "movie" of space flight - computers - watch mismatch DNA synthesis - dragon parade - oblivion. Complete recall. Restful sleep [18-22].
