

24. Febr. 77 4 mg

The time-effect-curve: after ~30 min the first effects, which are increasing for the first 30-60 min. a warm feeling in the total body, a light head-pressure, which is changing after a time in the feeling, that your head is one "balloon" without any anatomic differentiation. The visual (colors) perception is not very much increased (more after ~ 6h), the perception is only subtle changed (at least I did not notice it), I did not see sharper as after DOM. I noticed more subtle waves of movement, very smooth, not too busy as with DOM.

The tactile perception is enhanced; a feeling like with STP (boom) and MDMA (tissue, flesh) together. The acoustical perception is slightly enhanced. The taste is not too much decreased as with DOM, but the feeling of soft flaccid food is increased. - After 8-10h mainly no effect more; no trouble with sleep (as with DOM)

All together, the drug has an effect of serotonic and sensual enhancement but at heart at such a dosage lesser no disturbance, no overwhelming extroperspective feature.

The main effect for me was (is) - perhaps a-typically increased again as with STP as a result of our talks - that this substance still more than DOM "studies in my head" that should express, that more the introperspective - not too much the outer world - was the main feature.

Although the thinking process was something not so straight forward as with DOM; sometimes it was more the pleasure and play of thoughts, than the necessity of thinking.

However the substance is very helpful for the experience of yourself and the world, your world; it lifts (as STP) normal familiar thinking patterns and allows you to experience with more freedom. Because of the easier handling of the outer world (less sensoric disturbance and easier controlling) and a less "Amphetamine-effect" it seems to me, that this compound is a better possibility for a ?????? and experience during a "normal weekday".

The danger of a separation from body and mind is not so large, because the body-feeling is always existent and very good.

so the dualism (the old man) from mind and body seems to be non existent anymore (for my feeling very important, is one's want to create more specific compounds) This is mostly a personal comment; a more official elaborated and pharmacological report could be done if desired.
