

DOB - recalibration  
for eventual "R" and "S" study.

- (-) 0.01mg }  
- 0.03mg } from page 152      0.02 - 1.5mg with others.  
- 0.1mg }  
± 0.2mg }
- ± 0.4mg 4/10/77 9:15AM=[0:00] [1:00-1:15] v. slight head effect [2:00] clear.  
[3:30] a little addle-headed - maybe starry through [9:00] [12:00] all OK.  
at most, ±
- + 0.6mg 5/6/77 7:05AM=[0:00] note quiet, subtle window [3:00-8:00] - drop at  
[10-11] clear at [12] - try water shed run off [with] 5-OCH<sub>3</sub> DIPT at  
[14:30] q.v. overall +, interact [with] Robert Thompson.
- + 1.0mg 5/15/77 6:30AM=[0:00] [1:15] aware - a very light effect persisted all  
day. Probably gone by [12:00] but still intense talk - thought I would  
have trouble sleeping, but OK. Monte Rio. +.
- +++ 2.0mg 7/21/79 ATS, AP 7:45PM=[0:00] [1:10] real effects - very quiet entry  
[2:00] to ++ - developing f.[3 to 4] to a +++ physically (much tremor) and  
mentally (Möbius strip of reality) some LSD-like aspects - extremely easy  
eyes-closed entry into problems (personal) of depth, yet easy exit. little  
eyes-open distortion. Music quite impressive [5-6hrs](+++). Some fitful  
sleep [8-10hrs]. 12 hrs still ++ - [with] easy lapses of attention [20]  
still + finally out (?) [36hrs]. Very rewarding. Interesting to check  
"R" isomer.
- +++ 2.8mg 12/18/79 AP ≡ 7:00=[0:00] Both clear, 24 hrs p.absorb. [1:00] to + or  
sl. > + [1:30] ATS ~ ++ AP > ++. [3] AP severe cramp. Near fainting  
response to "pain" - but no pain. Near loss of consciousness -> flash of  
depersonalization - out of body. [3.5 to 5] clear +++ some visual - but  
truly extreme MDA, MDMA-like - this time no Möbius unreality [6] ATS prism  
ring around moon. severe "after images" [with] point light [9:00] off of  
+++ - 1st sleep - v. deep [14:00] still + - nearly [24] before completely  
baseline. Not the drama of the 2.0mg - but very +++.
