

N-2

- ++++ 5.0mg 11/21/76 9:45AM=[0:00] ATS Sunday. [0:38] almost believable 1st effects. [0:50] going into smooth threshold - it occurs to me that the concept of dASC/dt is more important in a drug's acceptance than the potency per se. [1:15] slight window effect [1:20] into something. [1:30] more window [1:45] spectacular ej [1:50] effects still developing - beginnings of visual effects. [2:00] wood moving in fireplace - on the edge of visual Hallucinations. the note paper scrunches as I write on it. Try lunch just to get it past me - no appetite - talk [with] Mandy on intransignency & state borders. [2:45] things wont stay still - moving all the time [3:00] concept of communication (non-verbal) - this is it - too bad about the visual distortions - too bad about the long livedness - but that's the way it comes. [3:10] pure power [3:20] cat events - can force things to move. intellectual explosion. There is light all around me, visually everything is bathed in soft light - I can make things flow. However I wonder if I could stand others around me, as free as I? I would have to extract an oath, which could not be violated,
- > that they would direct their energy into writing, or into weed chopping type work on demand, and not try to challenge the authority of the demander.
  - > that they would make no demand upon me that I would not be allowed to refuse.
  - > and if emergency should come up, I should take control.
- With these requirements met, this could be an incredible tool to explore the intellectual unknown - no one will emerge unchanged. This, to another in my presence, would constitute psychosurgery. [4:20] some drop in intensity [5:00] becoming quite lucid - residual shakes and muscular tremors. [7:00] still shakes - intellectually normal again, at [12:00] still tooth-rubby. Sleep at [14:00] fretful but restful - AM no after effect.
- ++(+) 4.0mg 2/24/77 9:45AM. ATS (+4.0mg Colin+Benita observer) [0:30] slight hang-over note- [1:10] light window. [1:50] Silly window - solipsism call to Ted at ~[3:00] out for long walk - back at [6:00] - much take on nonverbal communication - not too productive - CM with lapses out of motor control, then in - his sensory stability loss ~ +++ mine + at most. - I am still aware at [12:00]. Sleep well at ~[14:00] and no AM problems. CM gives it a +++ in quantitative.
- +++ 5.0mg 1/7/79 11:00AM=[0:00] QR +5 subtle onset to ++ in [1:30] Drive mystery spot, bizarre to +++ at [2:30-5:00] gradual decline. unworldly day- QR [with] muscular weakness. no peak effect of above 11/21/76 Handled well. Some sleep problems. +++
