- + 6.0mg 3/1/77 9:30AM ATS [0:00] - 1st lt.head at [0:27] [0:33-0:50] gradual window then more quickly to ~[1:10]. [1:10-1:45] intox - but full control of acts and thoughts. [2:20] sober. completely clear afternoon. No more than +.
- + 8.0mg 3/5/77 9:40AM ATS [0:00] [0:40-1:00] very quiet window (unlike the "moving" one of MDMA [1:30] - I suffer from the lack of an objective test for this state - I have a broad sensory sparkle - and yet am sober - I feel richly aware [2:00] clearing or cleared? - [2:40] completely clear - yesterday Wes. - wait a few days before any further testing. At most 1+.
- +++ (+) 10mg 3/17/77 8:00AM ATS [0:00] 1st window at [0:20] - rapid development [0:55] colors on edges of wiggles in eyes - on periphery of vision - a sort of Jesse Allen sensory design [with] intense color contrasts [1:30] still full - sparkle - impotent by good j nonetheless [2:00] still there. I would have greatest difficulty in driving a car - I would be limited by the logics of my responses - ∴ some LSD effects. [3:00] some dropping- mail-call- some phone calls [3:30] 1/2 way down [6:00] quite clear - but later in evening, - outside-body clean feeling- no stim of MDMA-more like PSOP. between 3 & 4 +
- + 8.0mg 5/3/77 7:55PM - 1hr post pran [0:21] early warning alert. [0:40] light window opening. [0:55] at a 1+ [with] quiet window [1:00] + is all - rapid recovery. at [2:00] out. Again - yesterday Σ 220mg MDMA - cross tolerance?
- + 8.0mg 5/6/77 9:35PM - water shed theory [with] DOB. [0:40] effects of window without any window actually occurring [1:10] aware of sensory thrusts, twangs [1:20] I am getting clanging of the nervous system - and I jump in reflex - zap. zap. [2:05] still some clangs - will I sleep? to bed. [4:30] still awake. occasional reflex jerk to what appears to be a burst of sound (speech?) or other stim. Then sleep. overall + - but not an enjoyable experiment. It is as if the residual DOB hid the window - and let through the neural stimuli. PEA vs. indole?
- + 10mg 5/10/77 3:25PM ATS (see N-6, AM) [0:30] tingle-alert. [0:55] I get there quietly - no window but awareness of all kinds of little sensory darts. [1:00] - twangs - this at high level will be a sense distorter PSOP-like? [2:00-3:00] to fish grotto- no problems driving. Interesting faces - quite sober but tend to emotional reaction. [3:00] dropping [4:00] out- residual good clear feeling. I am not at all sure now that I like this drug as much as I had thought. I must reacquaint [with] LSD - I may have lost my responsiveness to this - which might make the homologs (me, ipa; ; ect difficult to assay. We shall see. I am done with this for now.
