±	16mg		151	"	
+++	25mg		54	"	

- ++ 20mg 4/2/77 10AM=[0:00] ATS - part of 3-way comparison. [0:50] noticed sl.lt-head - as I was looking for it [1:00] altering quietly. [1:07] now a little more noisily. I enjoy the noise. [3:15] - outdoor almost normal - in lab, sensory richness - I would be interested to see 2x this effect. [4:00] I can make oranges in the lab. I must remember that a drug effect is always give and take. It catalyzes, but the subject brings the Rx to be catalyzed. I could see where another person with nowhere to turn might be very panicky at this level - quite like LSD in its "through whose eyes am I seeing this?". [6:00] clearing - between + and ++.
- + 25mg 10/6/77 6:00AM=[0:00][1:00] aware [1:20] build up [2:20] easy imagery [with] eyes closed [3:15] still + or ++. writing in fair shape. -no- I am at + [4:00] coming down fast.
- +++ 40mg 12/8/77 30mg 10:00AM=[0:00][0:25] alert [1:00] developing [1:30] to ++ [2:00] +10mg - to S.F. [4:00] +++ completely stoned but sensible! order picture at club [6:00] dominoes excellent [8:00] largely back! at +, whole day under control - bought painting - meet Piccio - read three incredible letters. I must equate to 60mg MEM. excellent. but not for a naive person without MDMA instruction first. I will repeat with interest.
- +++ 40mg 8/26/80, with 5µg 4-OCH₃ ¹⁴C AP ≡, 2:15PM=[0:00] alert at [0:30] [0:35] Noreen call! [0:45] past +, to [8:15] over ++ [1:30] +++ that extends to [4-5] much erotic [with] easy fantasy. Spin back & forth between imagery & visual stonedness. Nuisance to give sputum hourly. Try ACS Rhine things at [5:00] Not too good [6:00] ATS to ++ AP still +++ . ATS anorexia, AP not so. [8:00] eat eggs - no background yet at all. [9:00] sleep OK. AM [16:00] awake - no residue, AP sleeps, lethargic through day. Good; somewhat psychedelic, +++ . OK again.
