

4-thiomescaline, to page 345

- 2mg 6/27/77 ATS 5:40PM-in wake of TMA. n.e.
- 3mg <6/30/77 AB n.e
- 6mg 7/1/77 ATS [10:00AM]=[0:00] n.e.
- ± 10mg <7/9/77 AB possible ±
- + 16mg 7/25/77 ATS 9:03AM possible threshold [1:00][1:45] a real +; this is persistent on there noon hour into early afternoon [4:00?] - evening light frontal headache- for now, +
- ± 25mg 8/21/77 ATS [10:30AM]=[0:00].[2:00-2:30] slightly starry. [3:00] a ± or +, but I can't say what the action is [7:00] largely clear. yesterday MDMA-LSD!. ±

- ++ 40mg 9/17/77 ATS [10:55AM]=[0:00].[0:35] alert [0:55] some physical- something starts. [2:00] to a ++ full. between ++ & +++ from [2:00 to 3:30] things crawl but speech interaction [with] AB normal. Leary of lab work [5:00] slow drop [6:15] still + or ++ [7:00] to dinner [9:00] pretty much out - some physical residue. some alert overall - & crawls f.LSD - ++

- + 16mg 9/17/77 AB light effect , but +. felt all gone in evening [6:00] but the slightest stimulus would bring up a lightheadedness. neither of us [with] much window.

- ++ 30mg 3/1/78 ATS 9:20AM=[0:00][0:30] tingle[0:40-[1:00] to a ++ smooth, almost LSD-like edge-off unreality [1:20] physical tremor - things that I had written make no sense - at 2x intensity I would need a baby-sitter. Overwhelming aleph-like concept. For the first time I recognize that I can be viewed as a non-neuter - a male - can allow myself to be so viewed , rather than as the neuter that I had been by choice as an agreement to Mandy. Mandy had been my "5:30" for 30 years, good, and with her death, I felt the need to self-impose them. But there is an emasculation in 5:30's. Have I never been looked as a ♂ [with] some attractiveness? Have I never been aware of this? I had never allowed myself to be sexually exploratory - the commitment was complete, was respected, and is now met. Don't let BM be forced into playing MW's role. It would be selfish to (1) demand a new 5:30 role (2) require her to be it (3) destroy another's love in the process. No, let BM be free. [2:00] full ++ - can I swing [with] Ted for lunch? Sure. [5:00] coming out - good talk [with] Ted [7:00] mentally clear - but physical shakes muscle memory. [9:00] all clear. ++

- ++ 30mg 4/8/78 9:30AM (Colin [with] 25, Benita [with] 25) 10:30 to ++ some little window Benita [with] severe ut.cramps - down-garden (asparagus) try to eat (soup scene)- intense aleph interactions - development to mutual "schizophrenic" state - much reality loss - lab - hill - kite in driveway - try to prepare for Tusa's dinner 5-5:30. [8:00] Broiler house - still able to flip in easily - [14:00] to sleep (OK) next day repaired. Intense and not too nice (no fun) but rewarding. They +++.

- +++ 40mg 10/5/79 12:50PM=[0:00] AP. Alerts[0:15] AP [0:25] ATS fast development AP to ++ [1:00] , ATS [0:40] - [1:30] [1:40] AP +++ and more ATS? ++, almost +++. Eyes-closed imagery v.impressive, some clock-stop. much motion in visual detail. Complex and [with] depth of mescaline . Start dropping by [7:00]. Both [with] intestinal cramps - eat (modestly) [10:30][12] sleep fitfully - intense and rich dreams - urine production very light (~500ml / 18 hours) to be worked up for ArC₂COOH. [20:00] completely clear- no residue. extremely rewarding.
