- ++ 140mg (7/21/77) 10:02AM=[0:00] interaction experiment - alert 0:35 - [0:45] [with] considerable nausea (transferred) strong development [with] little loss in motor skills (piano - lab manipulation) keywords **automy**, commune. muscular and related awareness into evening. [12:00] - sleep easy. AM clear. ++ overall. Mirror faces - mouth, eyes, teeth.
- ++ 100mg 9/27/77 7:00AM=[0:00][0:30] compulsive sneezes - aware pulse to 116. [0:45] to 120 - nausea -[0:56] window - but [with] a serious note [1:00] still noisy, pulse 108 - at ++ - [1:20-2:00] pulse down - steady. [4:00] clear except for teeth.
- ++ 120mg 10/26/77 in two parts 3:00PM 80mg (this after N-methoxy MDA) [0:27] slight alert [0:30] start [0:45] to + not much more [1:20] + 40mg  $\Sigma$  120mg [1:50] still easy + [2:05][0:45new] to ++ but quietly. [2:30][1:10] back to + only - very well controlled. [4:00][2:45] almost out.
- [++] 160mg 11/4/77 [with] Ted. 120mg 7:30=[0:00] mine start [0:32] to [0:50] full ++ [2:00] steady but start down. [3:00] some drop [4:00] *this was* out. TS start [:28] - plateau - held to ~1:20 - then drops anxiety *MDMA*. and to full window - steady at [2:00][3:00] a little down - [4:00] largely down - would like to repeat someday.
- + 120mg 11/13/77 6:30PM=[0:00][1:00] eerie driving - to club, soup, wine - at + or ++. night experiment. no significant passing of + into minimum sensory input - move - normal - normal sleep at [5:00] - at honest - only +. MDA is not a night eyes-closed material.
- +++ 120->260 12/3/77 9:15AM=[0:00][0:25] alert [:30->1:00] to ++ [1:30]++[2:00] dropping + 80mg [0:19] sparkle again, more at [0:25] develop to +++ at [1:00] - teeth grit - no car driving [2:00] some eye unfocus clearing + 60mg [0:30] sparkle again - back up to ++ at [1:00] [with] more teeth clench. [3:00] clear but residual teeth clench into evening. afternoon relaxed. Overall pleasant.
