

MDE. from [page 206](#)
to page 412

- ++ 180mg 6/11/78 11:00=[0:00] (at Gove [with] AG 160 & TG 140) alert at [0:40] - development into delightful window from ~[1:00] to [1:45] - very self contained, but not with the affect transference of MDMA. - Supplement (each) of 60mg at [2:00] led to increased eye problems and teeth clench, but no mental virtues - largely wasted. Eye problems persisted even at [10:00]. overall ++.
- ++ 160mg 11/5/78 3:00PM=[0:00] (farm NT, CT 160) [0:40] onset - developed at [1:00+] - CT dizziness intox, then v.nice, NT some fleeting nausea. Both at least ++, very much intoxicated and enjoyable, ATS [with] some motor incoordination - no appetite at [5:00] although pretty much down. No sleep problems. in AM, NT really up, state of well-being but relaxed. Still elated. Both give v.high marks for quality of experience.
- ++ 160mg 12/13/78 [with] NT 160 1:25=[0:00][0:30] alert [0:50] to ++. Window - not the spectacular for NT as earlier - but v.satisfactory. Gentle recovery.
- ++ 160mg 01/24/79 [with] QR 160, 11:00AM=[0:00] good ++ window, some physical weakness - out at [4:00].
