1976-1977 ATS p.183

- ++ 20mg 8:25AM=[0:00] 10/17/79 ATS. [0:55] something? [1:00] more believable  
 [2:00] imp ej [2:15] at a nice, extremely quiet +. [3:00] up almost to ++,  
 very pleasant, not too well defined [4:20] back from CHP, AAA, bank, P.O. -  
 still ~++ of the most beautiful, benign, tranquil P.O.T. State conceivable -  
 completely at peace - continuous afterglow. Driving marred only by the  
 intellectual awareness that not every one else is this much at peace, ∴ could  
 be aggressive or irrational. [5:00] still ~++ (and arousable!) [6:00] back to  
 a very relaxed +. [8:00] almost out - ± at most. Completely clear at [12:00] -  
 relaxed eve. Castro's, Tamzin's meeting - modest wine → no intoxication  
 exacerbation. Overall the experience was one of "afterglow" tranquilization -  
 no color, edge effects, little if any teeth clench, no fantasy, simply peace  
 in being unrushed and relaxed. Extraordinary chemical. Must explore others at  
 20mg. ++.
- ++ .5 24mg (newly purified 2:170A) 11/21/79. 8:50AM=[0:00] ATS. [0:30] aware?  
 [1:00] at probable +, slow, nice development [1:15] >+, not ++ [1:30] almost  
 ++, smooth development, semi noisy. [2:00] back [with] mail, easy arousal, at  
 ++ [2:30] losing executability at ++, TG call handled OK, as if I had had  
 my P.O.T. truly. [3:00] at full ++, perhaps ++.5 - still erotically inclined,  
 but to even sober, [4:00] to lab [4:40] good ej [5:00] still ++.5 [6:00]  
 receding, back to + to ++, [7:00] to ± - 1st wine [9:00] residual ± -  
 excellent afterglow. Eat well. Wine neutral. Overall ++.5
- ++ 24mg 2/17/80 AP ≡. 6:08=[0:00] [0:30] alert and start [1:20] quietly to +,  
 AP [with] eye defocusing, no tremor. By [2:30] to ++ at most. [5:30] back to  
 kitchen - never over ++ - not as intense as last experiment. AP sound sleep,  
 ATS unable until ~2 hrs following [10:00] - tired next day, but simply sleep  
 loss. overall ++
