

5-SCH₃ DMT.

- + 15mg 11/23/79 ATS. on tansy. (1/2 40mg joint) [2:00]=0:00 Consumed over 75 seconds. 90 sec. notice [0:02] to over + one. Light, \cong 5-OCH₃ [0:03] between + & ++, no visual, rather pointless stoned. [0:05] start to clear [0:10] largely repaired. Prob. +.
- ++ 20mg 11/23/79 - from above 2:40=[0:00]. consumed 0-120 sec. Noted at [0:01], [0:02] coming on - some what more intense this time. [0:05] near, but not at ++; [0:08] dropping rapidly, [0:20] almost baseline [0:25] clear. Call it a light ++. I suspect 30mg would be effective.
