

5-TOM. ([from 468](#))

(++-+++!) 30-50mg, the Group. 11/14/81 12:00M=[0:00] overall - alerts [:30-:40] - some physical malaise [:35-1:30] - max at ~[2] - drop [4-6] still residue, at [8:00] - some to next day. Overall; physical > mental to ~[4 or 5] - then relatively positive. Generally good sleep ~[12] - AM [with] mixed aftermath. Specifics - variable.

AP - ~++, not too positive - good sleep - AM - irritable. (50mg)

CT much visual (+++) favorable, but early discomfort. (35mg)

ATS - to ~++, disappointed - most visual, color, not worth it (50mg)

MP body clears at [1:30] - to ++, quite open, not spectacular (40mg)

TG >+, visual, quite favorable; quite down @[8] (30mg)

TS ~++ concept: would you take supplement to extend? no, consensus (45mg)

AB ~++, ~slept in latter portion. neutral., outside better. (45mg)

AG ~>+ early subtle, then body/mind->mind/body, not exalting so so. 40mg

NT >+++ catatonia from [2->6] - neurological problems. slow recovery, then rapidly to communication at [8:00] - a.m. still integrating - next day slow recovery. Intensively complex physical + mental state - suspect SCH₃ metabolic individuality - must challenge. 48hrs, baseline. No regrets. (40mg)
